

MICE (Site-Local) — Distributional Recovery of 3-Level Correlated Outcomes

8 missingness scenarios | m = 5 imputations | PMM within site

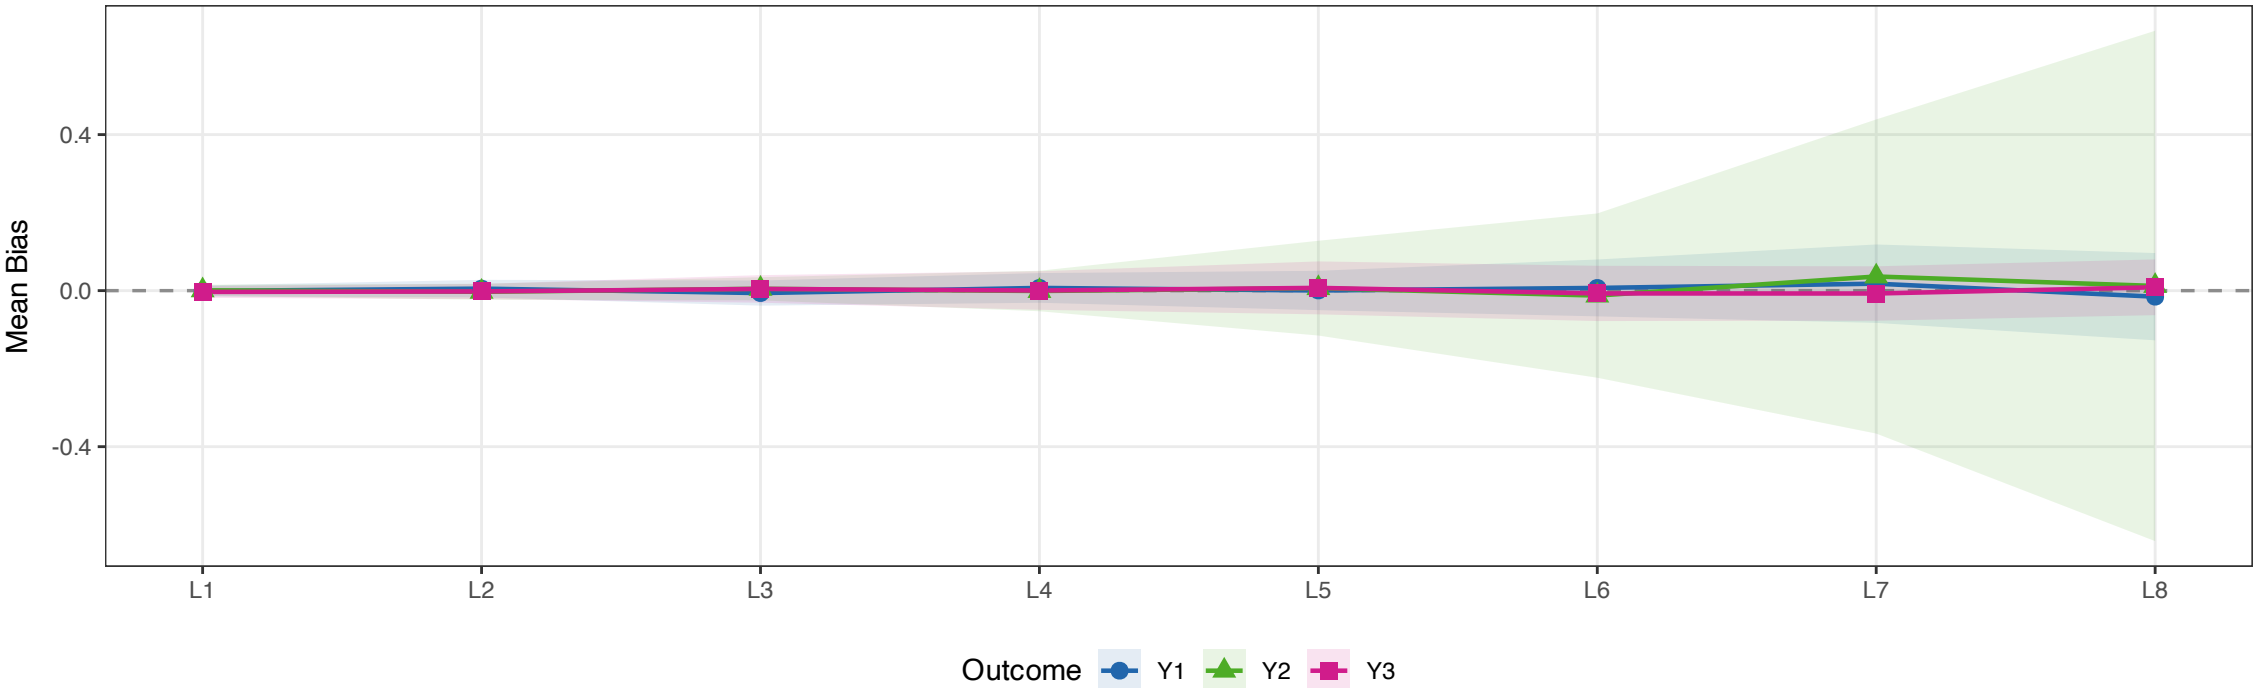

Missingness Rate per Outcome

Sequential logistic mechanism; L1 = mildest, L8 = most severe

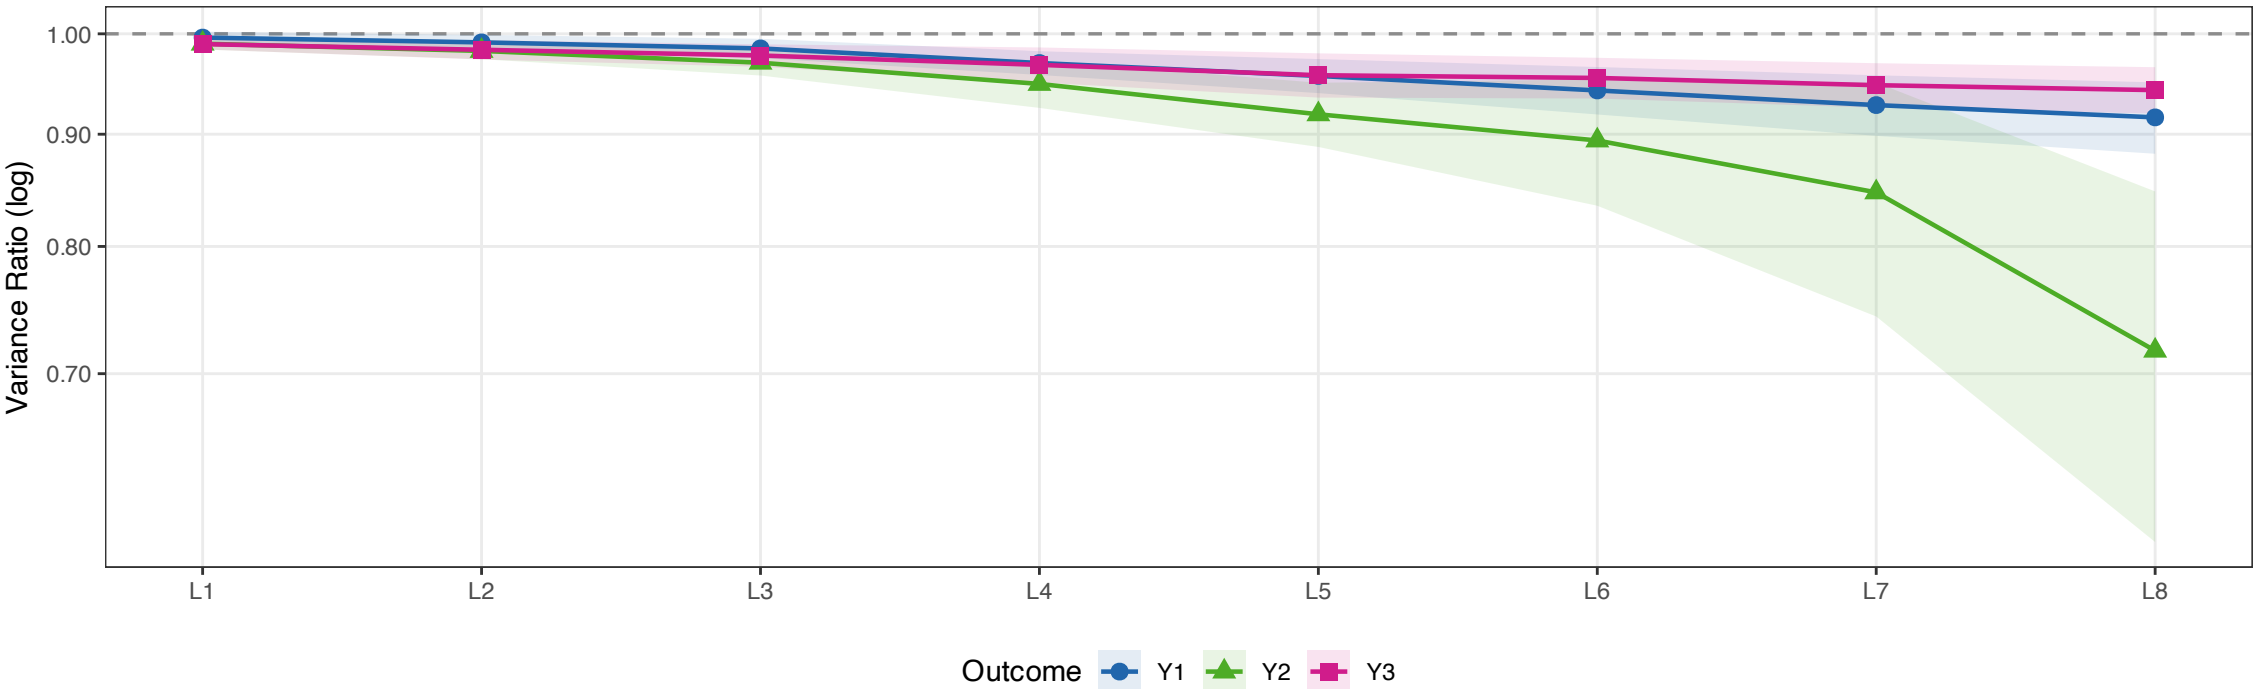

Mean Bias [E(Y_imp) - E(Y_true)]

Ribbon = +/- 1 SD across reps; dashed = zero bias

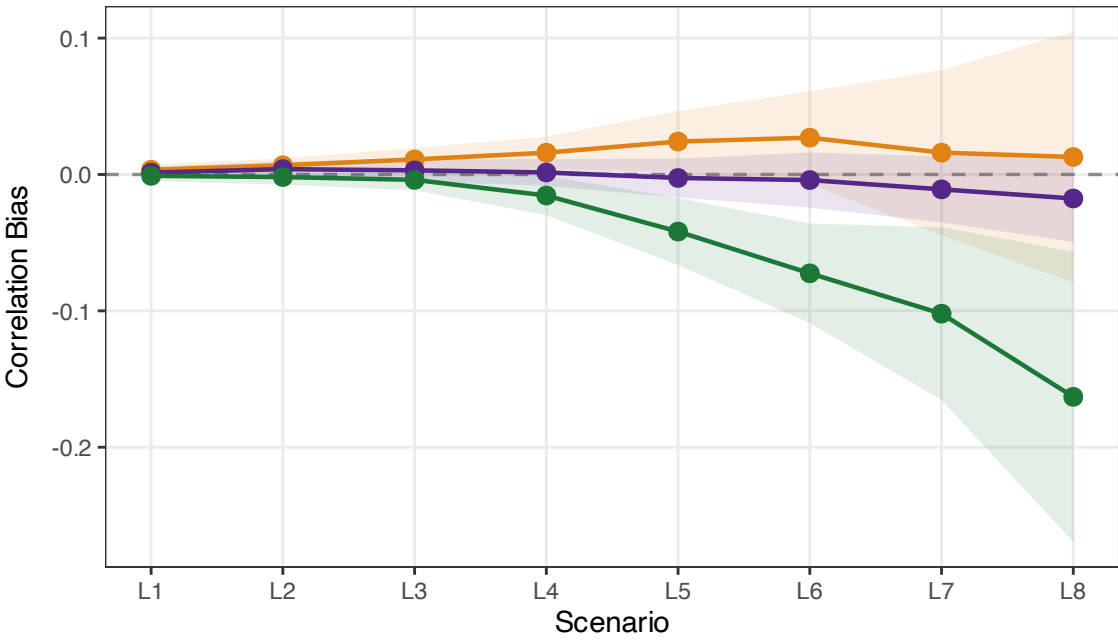

Variance Ratio [Var(Y_imp) / Var(Y_true)]

Log scale; dashed = perfect recovery at 1.0

Correlation Bias [rho_imp - rho_true]

Dashed = zero bias; ribbon = +/- 1 SD across reps

Recovered Correlation

Dotted line = true rho per pair; solid = imputed estimate
